

Teflon

PTFE Coated Fiberglass

General Description:

Teflon is a PTFE coated fiberglass fabric. This special coating technology is used for industrial fabrication. It has excellent chemical resistance, abrasion resistance, and high temperature resistance. Teflon is flame resistant and most commonly used in industrial facilities with harsh environments such as; acid plants, paper mills, and petrochemical plants.

Physical Properties:

Color: Grey

Weight: 16.5oz/sq. yd.

Thickness: .015 inches

Tensile Strength:

Warp: 400lbs./inch

Fill: 300lbs./inch

Upper Use Temperature: 600°F Continuous
